

A SERIES BROUGHT TO YOU BY:

ALZHEIMER'S ASSOCIATION®

Dementia is not a single disease, but rather an overall term — like heart disease — that covers a wide range of specific medical conditions, including its most common form, Alzheimer's disease. This series will take a deeper dive into various disorders "Under the Dementia Umbrella."

PART 2 | APRIL 21, 2022 | 6:00 - 7:30 PM

UNDERstanding Frontotemporal Dementia (FTD) and Primary Progressive Aphasias (PPA)

Presented by Heidi Roth, M.D., Department of Neurology | UNC Chapel Hill

In frontotemporal dementias there can be a greater burden of problems in personality and behavior. FTD diseases can cause people to become more disinhibited, have reduced empathy, or not follow social norms. PPA can cause changes that are restricted to speech and language with preservation of memory and other functions.

We will discuss the symptoms most commonly seen in these conditions, the underlying causes, how these differ from Alzheimer's disease, and how these conditions can be best treated and supported.

Program made possible
by series partners and:

Registration is required, and registrants will be sent conferencing details prior to the date of the program. Registrants will be given the option of joining via video/webinar or through a toll-free number. Recordings of the session and certificates of attendance will also be available.
